

YOU HAVE A PROJET, WE WOULD LIKE TO KNOW MORE...

Thank you for getting in touch with us.

This document is to enable us to identify the main features of the project and study the fit between our mission and your proposal.

Electriciens sans frontières is an international NGO that mobilizes volunteers who put their expertise at the service of sustainable actions to provide access to energy, water and economic development (lighting, water pumping, economic activities, etc.) within the framework of development projects that benefit the poorest populations. We intervene in support of project management, leading training and/or project management.

If your project meets our criteria it will be shared with our volunteer network through the various regional offices that carry out the projects. The volunteer team will then contact you to prepare together a complete file (technical and socio-economic study, preparing an implementation file based on any selected options, fundraising, and implementation).

Electriciens sans frontières is neither a donor nor an organization that provides equipment.

Warning: being contacted by a volunteer does not guarantee the project will proceed. The file must be reviewed and approved by our various committees.
